pines · Remote-first

PROFILE

I design, build, and run **SPYCE PROJECT** — a portfolio of interconnected AI products, operated solo across product, architecture, code, and growth. My work sits at the layer where agents take real action: dispatching pull requests, executing automations across 50+ connectors, and orchestrating multi-agent swarms. Seven systems shipped or shipping, spanning command-and-control platforms, an AI site builder, an automation engine, a social app, and developer tooling. I treat AI as a technical co-founder and ship in public, spec-first, with test-driven discipline. I'm also a **Professor in the Social Sciences** — philosophy trained me to reason carefully and question assumptions; software lets me build and ship that thinking. I move between a classroom and a codebase in the same week, and each one sharpens the other.

EXPERIENCE & EDUCATION

Program Head & Faculty **Present**

University of Iloilo

Contribute to program development while ensuring alignment with institutional goals and industry standards; manage program operations, integrate technology solutions, and mentor students.

Master in Education, Major in Social Sciences **In progress**

Guimaras State University

Advancing expertise in social science education methodologies; focusing on contemporary educational practices.

Founder & Full-Stack Engineer **Present**

SPYCE PROJECT — solo

Design, build, and ship a portfolio of AI-native products end-to-end — frontend, backend, database, and deployment — as a solo operator.

Bachelor of Arts in Philosophy **2017**

St. Anthony's College & St. Peter's Seminary

Comprehensive study in philosophical foundations, ethics, and critical thinking; developed strong analytical capabilities and logical argumentation.

PORTFOLIO — PRODUCTS BUILT & OPERATED SOLO

Aether **Command Plane · Building**

AI command-and-control platform. A commander dispatches real work to subordinate repos via GitHub repository_dispatch, running Claude Code headlessly and streaming results back through Supabase Realtime to a live mission log.

Supabase · GitHub Actions · Realtime · Edge Functions · Vercel · Gemini

Deployr **AI SaaS · Live**

AI-powered site builder. A four-endpoint pipeline turns a plain-English idea into a deployed URL — generate, push to a repo, deploy — no code, no config. Own OAuth flow against GitHub and Vercel, billing via Lemon Squeezy.

Gemini · GitHub Trees API · Vercel REST API · Supabase · Lemon Squeezy

SPYCE **Social App · Live**

Short-video social app on Pi Network — creator marketplace, two-way buyer/seller messaging, two-step withdrawals, notifications, and a role-based admin plane (owner/reviewer/finance/moderator).

React · Vite · Zustand · Node/Express · MongoDB · Cloudinary · Pi SDK

Relayr **Automation Engine · Shipped**

Internet automation engine — a declarative flow-spec validator and executor with exponential-backoff retries, idempotent dedup keys, and step-to-step context chaining across a 54-connector catalog spanning 16 categories.

Node · MongoDB driver · generic connector adapters · redacted run logs

Loadout Agent Toolkit · Shipped

Zero-dependency operator kit for AI coding agents (Claude Code, Codex, Cursor, OpenCode, Gemini, Zed, Copilot) — a pack registry, compose engine with conflict detection, and MCP config generation across five harnesses.

Node CLI · pack registry · MCP config generation · Vercel AI stack-recommender

OneGo Fare Aggregator · Building

React Native fare aggregator for the Philippine transit market — routes, fares, and transit intelligence in one native Android app, backed by Firebase.

React Native · Firebase · Java 17 · Gradle

spyce-forge Dev Tooling · Shipped

Consolidated Claude Code plugin unifying methodology, MCP servers, orchestration, and libraries — eleven repositories collapsed into a single install.

Claude Code plugin · MCP (Context7, Playwright, Porkbun) · skills · orchestration

OTHER WORK

Faculty Onboarding Analytics — PHINMA Education. Built a Google Apps Script leaderboard system tracking ~17–18 editors: a hidden raw-log sheet feeding a live dashboard, with scheduled triggers for daily recompute and weekday-snapshot rollover. Also authored a 10-slide lesson-plan deck ("Understanding the Self") grounded in Mayer's Multimedia Principles.

STACK & METHOD

Languages	JavaScript/TypeScript · Python · SQL
Frontend	React · React Native · Vite · Zustand · vanilla JS/CSS
Backend	Node.js/Express · Supabase (Postgres, RLS, Edge Functions, Realtime)
Infra & AI	GitHub Actions · Vercel · MongoDB · Gemini · Claude Code · MCP
Method	Spec-first design · test-driven development · ship-in-public cadence
Academic leadership	Program development · curriculum planning · student mentorship
Philosophical foundation	Critical thinking · ethical reasoning · systematic problem-solving

AVAILABILITY

Open to select work — technical co-founder roles, contract engineering, and advisory engagements in agentic/AI infrastructure, alongside educational consulting and speaking engagements. Reach out via email or GitHub.
